Kyle Klausen

CSD440

Module – 4

04/12/26

Code: (same as the other weeks, code does not format correctly on copy & paste, here is screenshots of my code from VSCode. Thank you!)

<h1>Palindrome Checker</h1>

<?php
/*
Name: Kyle Klausen
Date: 4/12/26
Assignment: Palindrome Checker - Module 4

Purpose: This program checks whether a given string is a palindrome by comparing it to its reversed form.
*/

/*
```

Tomcat deploy: Disable | Ln 21, Col 24 | Spaces: 4 | UTF-8 | LF | PHP

Welcome | Kyle Palindrome.php

Users > kyleklausen > csd > csd-440 > module-4 > Kyle Palindrome.php

```php
/*
-----------------------------------------------
Function: isPalindrome
Purpose: Determines if a string is a palindrome
-----------------------------------------------
*/
function isPalindrome($input) {

    // Normalize string (remove spaces and convert to lowercase)
    $normalized = strtolower(str_replace(' ', '', $input));

    // Reverse the normalized string
    $reversed = strrev($normalized);

    // Compare original and reversed values
    return $normalized === $reversed;
}

/*
-----------------------------------------------
Function: displayResult
Purpose: Displays original string, reversed string,
         and whether it is a palindrome
-----------------------------------------------
*/
function displayResult($text) {

    // Prepare reversed version of original string (for display)
    $reversedDisplay = strrev($text);

    // Call palindrome test function
    $result = isPalindrome($text);

    echo "<div class='result'>";

    // Display original and reversed strings
    echo "<strong>Original:</strong> $text <br>";
    echo "<strong>Reversed:</strong> $reversedDisplay <br>";
```

Tomcat deploy: Disable | Ln 21, Col 24 | Spaces: 4 | UTF-8 | LF | PHP

Users > kyleklausen > csd > csd-440 > module-4 > Kyle Palindrome.php

```php
function displayResult($text) {
    echo "<strong>Reversed:</strong> $reversedDisplay <br>";

    // Display result
    if ($result) {
        echo "<span class='palindrome'><strong>Result:</strong> This is a palindrome.</span>";
    } else {
        echo "<span class='not-palindrome'><strong>Result:</strong> This is NOT a palindrome.</span>";
    }

    echo "</div>";
}

/*
-----------------------------------------------
Main Program Section
Purpose: Stores test cases and runs palindrome checks
-----------------------------------------------
*/

// Array of test strings (3 palindromes, 3 not)
$testStrings = [
    "racecar",
    "madam",
    "level",
    "hello",
    "world",
    "php code"
];

// Loop through each string and display results
foreach ($testStrings as $string) {
    displayResult($string);
}

?>
```

0 ⚠ 0 | Tomcat deploy: Disable | Ln 21, Col 24 | Spaces: 4 | UTF-8 | LF | {} PHP

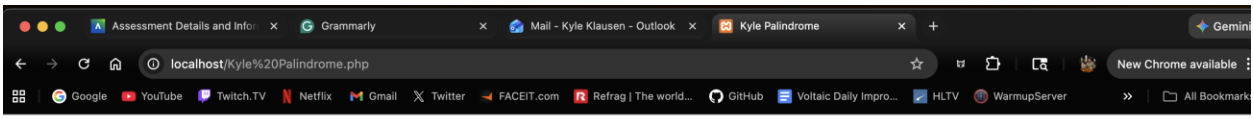
Screenshot of successful run:



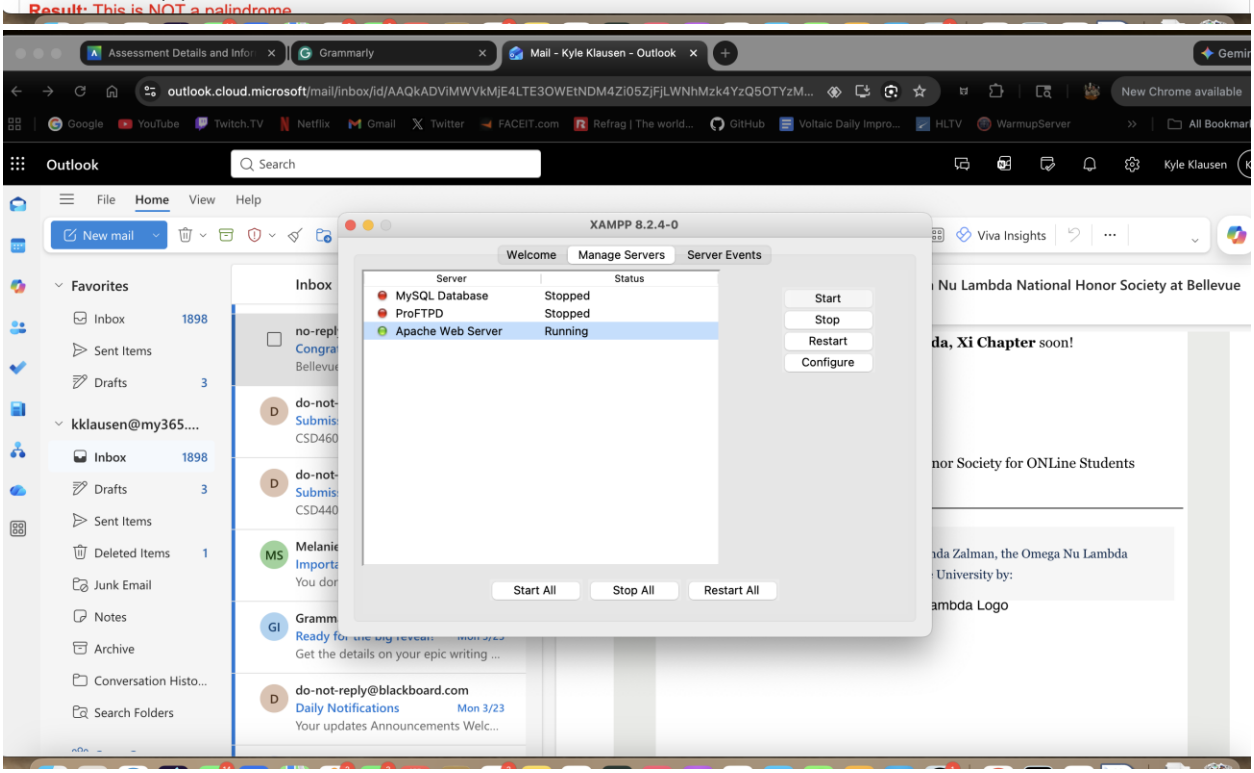
Palindrome Checker

Original: racecar
Reversed: racecar
Result: This is a palindrome.

Original: madam
Reversed: madam
Result: This is a palindrome.

Original: level
Reversed: level
Result: This is a palindrome.

Original: hello
Reversed: olleh
Result: This is NOT a palindrome.

Original: world
Reversed: dlrow
Result: This is NOT a palindrome.


Original: php code
Reversed: edoc php
Result: This is NOT a palindrome.
